## Burrus – committed to quality

At Burrus we are committed to the highest quality possible. We routinely use our “hooded sprayer” to remove any impurities in our seed fields. If the herbicide technology is on the male we spray the chemical on the male rows while protecting the female rows with hoods. If it is on the female, we do the opposite. In fact we had so many acres to be covered this year, we set up the second 16-row hooded sprayer.

With more products carrying one herbicide technology on the male and another on the female, we can apply both on one pass with two tanks. Just one more step in providing the ultimate in high quality seed. If you are not planting all Burrus yet, ask your seed supplier if his seed is handled this way.
